Sovereign intelligence.

**Fully private.
Completely yours.**

Public cloud AI introduces unacceptable vulnerabilities for sensitive corporate data. We offer comprehensive on-premise solutions which brings enterprise-grade intelligence directly to your German infrastructure, guaranteeing absolute data sovereignty without compromising performance.

START PRECISE. SCALE SOVEREIGNLY.

Deploy a powerful, Large Language Model following European values and regulations, immediately for your workforce's daily tasks - no subscriptions, no external servers. As your needs evolve, we can upgrade your system seamlessly into a custom company assistant. We can bridge your internal knowledge bases across departments entirely on-site, creating a dedicated intelligence layer tailored exclusively to your operations.

SOLE DATA OWNERSHIP GUARANTEED

You retain complete control over every byte. We develop, deploy, and maintain the system, but we never access your data. All inputs, prompts, and AI-generated outputs remain strictly within your physical walls. No third-party extraction, no external APIs, pure autonomy.

WHY GERMAN KMUs CHOOSE LOCAL AI:

Zero Leakage: Processing occurs exclusively on hardware physically located inside your facility. Intellectual property and client metrics never traverse public boundaries.

Uncompromised Compliance: Fully aligned with GDPR and federal security standards. Privacy is engineered as a fundamental right, not an optional feature.

Turnkey Independence: From conceptualizing server architecture to installing specialized hardware and configuring the infrastructure, we hand you a self-sustaining system.

Precision Over Hype: Engineered for depth, reliability, and sustained value. Unlike volatile public APIs, your local system provides consistent accuracy tailored specifically to your industry context and legal requirements.

Accelerate your workflows with depth, reliability, and sustained value. Upgrade from a capable assistant to a fully integrated corporate brain - without ever surrendering your data.
